

INTRODUCING:

Heyward Incorporated is pleased to announce representation of InfoSense, Inc. in North and South Carolina.

InfoSense, Inc. is the developer of the SL-RAT, **Sewer Line Rapid Assessment Tool**. The SL-RAT is a portable low-cost device that can provide an overall segment blockage assessment in 2-3 minutes – without confined space or flow contact. With two operators, it can assess up to 15,000 feet of sewer line in a day. The primary benefit is to increase overall efficiency of larger assets, such as CCTV and jet cleaning.

What percentage of your lines being CCTV'd and cleaned are, in fact, already clean?

It is possible to significantly reduce SSO's with the SL-RAT.
