

Heyward Incorporated is pleased to announce representation of:

Swaby Lobeline

As the only US manufactured rotary lobe pump, the lobeline pump is part of the Swaby pump group and offers an extraordinary product in the heavy duty sludge pumping industry. The lobeline product combines maintenance friendly operation with reliability and performance. The rotary lobe design offers many benefits over traditional sludge pumps including:

- Rotary lobe pumps offer an exception floor space savings to traditional progressive cavity or plunger pumps.
- The Lobeline offers the separation of the bearing housing from the wet-end components through the air-gap present.
- Front cover plate design allows for quick and easy parts replacement
- Blockage removal is also easier with the cover plate as well as with the ability to reverse the pumpage flow direction.
- Rotary Lobe pumps offers the ability to run dry paired with very high solids handling abilities
